How to add a Store Locator to your Wordpress Website

There are two different ways you can add Storemapper store locator to your WordPress website. Here is how you can do that.

- [ ] Login to your WordPress account.
- [ ] Create a Storemapper account by signing up at storemapper.com.
- [ ] Install the 'Storemapper for WordPress' plugin and activate it.
- [ ] Go to your Storemapper plugin settings page and enter your 'Account Id' by following the direction provided on the page.

Via Widget

- [ ] In the left side panel, go to Appearance > widget. You will be redirected to the widgets page.
- [ ] On the widgets page, find the Storemapper widget.
- [ ] Click on the Storemapper widget and from the available options list, select the section where you want to add the store locator.
- [ ] [Optional] Add a title to the widget.
- [ ] Save the settings and boom!

By inserting/adding shortcode directly to the page

- [ ] In your WordPress account, open the page that you want to add the store locator to.
- [ ] If you have a Storemapper store locator correctly installed, in the editor, you'll find this insert Storemapper shortcode button.
- [ ] Enter an optional title .
- [ ] Once you are done with selecting the title and HTML title tag, click on the update.
